

CLAIM AMENDMENTS

1. (Currently Amended) A portable apparatus comprising:
~~inputting means for inputting operation instruction information for effecting control of an apparatus external to the portable apparatus;~~
~~transmitting means for transmitting to a central processing unit the operation instruction information for effecting control input by through the inputting means to a central processing unit;~~
~~receiving means for receiving from the central processing unit a remote controller control instruction, corresponding to the operation instruction information in cases where for effecting control, the central processing unit refers referring to a data base in which a plurality of remote controller control instructions corresponding to respective instruction information are stored, and sends back the remote controller control instruction corresponding to the operation information; and~~
~~control means for controlling an operated operation of the apparatus according to external to the portable apparatus, in accordance with the remote controller control instruction received by the receiving means.~~
2. (Currently Amended) The portable apparatus according to claim 1, wherein a voice emitted from a user is input ~~to the inputting means~~ as the ~~operation instruction information for effecting control to the inputting means~~.
3. (Currently Amended) The portable apparatus according to claim 1, wherein a moving picture indicating a gesture of a user is input ~~to the inputting means~~ as the ~~operation instruction information for effecting control to the inputting means~~.
4. (Currently Amended) The portable apparatus according to claim 1, wherein one of a letter and a symbol written by a user is input ~~to the inputting means~~ as the ~~operation instruction information for effecting control to the inputting means~~.
5. (Currently Amended) The portable apparatus according to claim 1, wherein code information indicating one of letters and symbols is input ~~to the inputting means~~ as the ~~operation instruction information for effecting control to the inputting means~~.
6. (Currently Amended) The portable apparatus according to claim 1, ~~including an acceleration sensor, wherein an external power movement of the portable apparatus measured~~

by ~~an~~ the acceleration sensor is input to the inputting means as the ~~operation instruction~~ information for effecting control to the inputting means.

7. (Currently Amended) The portable apparatus according to claim 1, including an environmental sensor, wherein ~~environment~~ environmental information measured by ~~an~~ the environment sensor is input to the inputting means as the ~~operation instruction~~ information to the inputting means for effecting control.

8. (Original) A remote control system, comprising:
inputting means, arranged in a portable apparatus, for inputting operation information;
transmitting means, arranged in the portable apparatus, for transmitting the operation information input by the inputting means;
a central processing unit for receiving the operation information from the transmitting means, referring to a data base in which a plurality of remote controller control instructions are stored, retrieving a remote controller control instruction corresponding to the operation information and sending back the remote controller control instruction corresponding to the operation information;
receiving means, arranged in the portable apparatus, for receiving the remote controller control instruction from the central processing unit; and
control means, arranged in the portable apparatus, for controlling an operated apparatus according to the remote controller control instruction received by the receiving means.

9. (Previously Presented) The remote control system according to claim 8, wherein the central processing unit performs an ambiguous retrieval process, in cases where no remote controller control instruction corresponding to the operation information exists, and sends back a remote controller control instruction most suitable for the operation information.

10. (Previously Presented) The remote control system according to claim 9, wherein the central processing unit learns a correspondence relationship between the operation information and the remote controller control instruction most suitable for the operation information and sends back the remote controller control instruction without performing the ambiguous retrieval processing when the central processing unit receives identical operation information on a subsequent occasion.

11. (Previously Presented) The remote control system according to claim 8, wherein the central processing unit specifies a user of the portable apparatus in cases where the central processing unit has a data base of each of a plurality of users, the central processing unit refers to the data base of the user, and the central processing unit retrieves the remote controller control instruction corresponding to the operation information.

12. (Previously Presented) The remote control system according to claim 8, wherein the central processing unit charges a handling fee according to use of the remote controller control instruction used in the portable apparatus.

13. (Previously Presented) The remote control system according to claim 8, wherein the portable apparatus is a portable telephone.

14. (Previously Presented) The remote control system according to claim 8, wherein the portable apparatus is fixed to the operated apparatus.

15. (New) The portable apparatus according to claim 1 including a housing containing the inputting means, the transmitting means, the receiving means, and the control means.
